To Whom It May Concern:

St. Mary's Hospital recently purchased a 2,875 square foot modular building from Rose Office Systems. The building was purchased for use as a pediatric medical clinic and the clinical staff are thrilled with the building.

Gary Cain made visits to meet with the staff to determine their needs and continued to work with them until they were satisfied with the design.

My concern was to get a building that would look professional since it is located within 100 feet of our hospital building. Gary made some recommendations on exterior design elements and I can say he was correct because the building really looks like it "belongs" there.

I would recommend Rose Office Systems to any company that needs modular office space. We are happy with our new modular building.

Sincerely,

Mike Lester, Director  
Facilities/Plant Operations
